

Taylor Swift Friendship Bracelet Website

Created in August 2024 by Jessica Tan.

1.0 Problem Statement

When creating friendship bracelets for the Taylor Swift Eras Tour [1], alphabet letter beads are used to make phrases, words, song titles, lyrics, etc. and letter frequency means that some letters will be used more often than others. This creates a problem where you may run out of certain letter beads and need to find words that do not contain that letter.

Inspired by the Pinterest lists and excel sheets made by Swifties (Taylor Swift Fans), this website provides a more dynamic with customized filtering experience for Taylor Swift song titles. You can choose what letters to exclude and it will provide a list of song titles without those letters in it organized by their respective albums.

1.1 Technology Used

NextJS, TypeScript, JavaScript, HTML, CSS, Tailwind CSS

2.0 User Interface Design

The user interface design was created in Figma [2]. The first step in developing the website was to create mock-ups, sketches, and UI designs in Figma. Figure 1 shows the Figma design for the single page that included scroll. Each album section takes inspiration from the album concepts such as font and colour.

Figure 1. User Interface Wireframe for Scroll page created in Figma

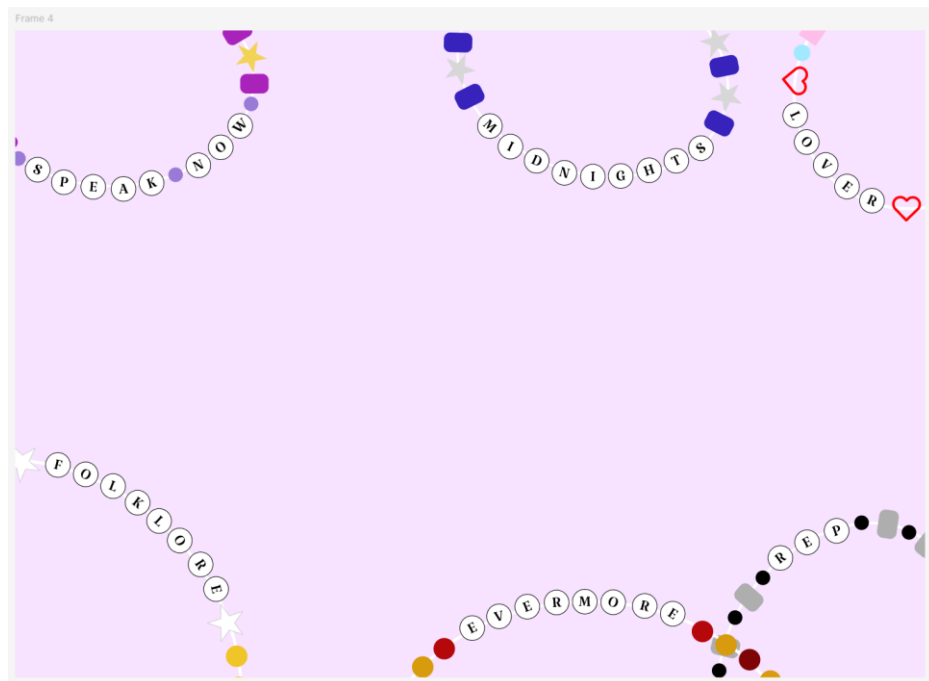

Figure 2. Landing Page Background Image created in Figma

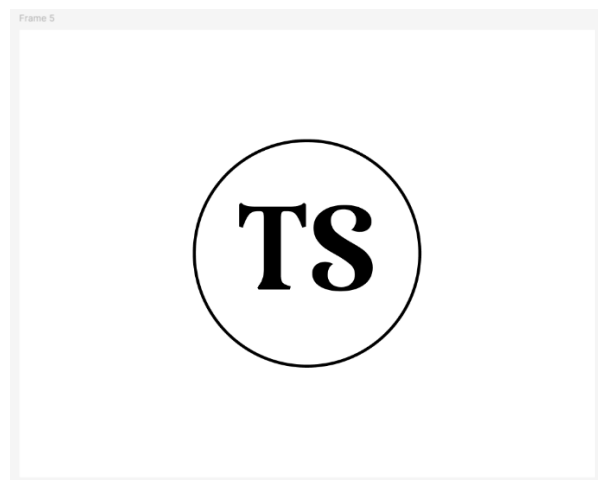

Figure 3. Favicon Logo created in Figma

The page background and logo design are based on the letter beads and bracelets created by Taylor Swift fans. For example, the bracelets shown in the background image are album titles: Speak Now, Midnights, Lover, Folklore, Evermore, and Rep (“Reputation”).

3.0 Development

App	Fonts.ts - Import 9 Google Fonts Globals.css - CSS Layout.tsx Page.tsx
Components	Footer.tsx Navbar.tsx SongsComponent.tsx - Main Single Page. - Filters songs based on selected letters. - Displays Album Sections with song titles using the data from the file Album.ts.
Data	Album.ts - Data for all albums and songs.

Table 1. Folder Files Structure

The website was created with NextJS. NextJS is a full-stack React framework created by Vercel [3].

The back-end code for the website functionality was written with TypeScript and JavaScript. The main features of the website back-end code are displaying the sections from a list of data using components and filtering to display song titles based on letter buttons pressed. The front-end code for the website user interface was written with HTML, CSS, and Tailwind CSS.

The development period for this website was from August 11, 2024 to August 12, 2024, and from August 24, 2024 to August 28, 2024. A total of 6 days to develop from concept to completion.

4.0 Deployment

This website was deployed using GitHub pages.

For NextJS applications, GitHub provides a deployment template file nextjs.yml. Deployment is performed using the GitHub online interface.
